University of pune, MH, India

Grade – First class

🗣 Languages

English, Hindi, Marathi

🌐 Interests

Driving, Swimming, Internet Surfing, Farming.

📄 Personal Information

city. By using this application any person can order their willing dish (menu item) to any Tiffin service provider at any day any time online.

D.O.B: 12/01/1993
Gender: Male

Responsibility: Worked on migration of 21 applications Worked on configuration of trident and ocp related configuration. Written Unit and integration test cases. Worked on Pivotal Cloud Foundry (PCF) and OpenShift Container Platform Cloud. Worked on production deployment, Jenkins Related issue, Database migration etc. Worked on Traffic flip from pcf to ocp. worked on GTM, LTM creation, Creating Incident, RITMs, SSO request. Worked with network team, secret storage team, cicd team, Worked on taking nesaray approvals. Worked on core API gateway framework. Worked on waivers, resolution, packages upgrade, node js version upgradation. Worked on API monitoring tools like instana and app dynamics. Worked on a self-managed, automatic code review tool that systematically helps you deliver Clean Codecode coverages like SonarQube. Worked on repository manager that stores, organizes, and distributes artifacts nexus tool.

#2 Agilent Mendix Program

Domain: Medical, Life Sciences, Health Care

About: We have build multiple applications based on sales and distribution information and instrument recovery details. In this project we have replicates ECC, CRM, Salesforce data and integrate with Mendix tool by using APIs Based on NodeJs Code.

Responsibilities: As per API lead my main responsibility are to gather the requirements, design the API Developed the API as per Sql script, testing, documentation, and transportation of API to other environments, And also I need to work on existing API if user raise any ticket in jira tool. We have developed 150+ APIs for 20+ applications and delivered successfully with Authentication and Scopes. We have implemented one automation framework to tracking the IP address, Host DNS, Throttle count etc for Mendix application.

#3 Chorus [View project](#)

Domain: Research Paper, Content

About: The dashboard service enables funders, institutions, researchers, publishers, and the public to keep track of public-access compliance by our publisher members. CHOR monitors Publisher Member/Pilot Participant content and audits for public access and other criteria. The agency dashboard links below provide both aggregated data and a path to the actual articles. Click on the agency name to access the dashboard.

Responsibilities: We are 3 Backend Developers devs on projects with one Lead. My responsibilities are to add new features/work on the existing codebase, Do releases, Fixing issues, Writing scripts etc. Assign tasks for fresher students and review the codebase. Do some elastic search-related operations like report generation, import data in elastic search, syncing data MongoDB to elastic search. Coordinate with team members, understand requirements, integrate restful API. Do deployment on different environments. Do FTP server related operations.
